## Clearview Software International Teams with RSA Security to Securely Deploy and Manage its Web-based Remote Access Software

### *Application Service Provider Selects RSA BSAFE® Crypto-C for Incorporation into its CSWEB product*

**BEDFORD, Mass.** -- RSA Security Inc. (NASDAQ: RSAS) today announced that Clearview Software International, Inc., a leading provider of software tools and services that integrate Windows technology into host-based, legacy applications, has selected RSA BSAFE® Crypto-C software to secure its CSWEB product.

CSWEB allows users to access corporate applications remotely over the Internet using a standard browser interface. With CSWEB, users can create custom WEB pages that link to various hosts and automate tasks such as login sequences and menu navigation using its JavaScript and ActiveX interfaces.

To protect users, and help ensure that all transmitted data is kept private, CSWEB has been enhanced to support the SSH1 Secure Telnet™ protocol. SSH1 helps guard against hacking techniques such as IP and DNS spoofing, and encrypts all text so that passwords and other sensitive data remain confidential. The software features public-private RSA key authentication and offers a choice of encryption ciphers. CSWEB is fully compatible with both Microsoft's Internet Explorer and Netscape's Navigator Web browsers.

"The Internet and the ASP business model are transforming the software industry," said Mark Sweeney, vice president of software at Clearview. "Delivering applications quickly, inexpensively, and securely over the Internet is a strategic vision shared by many of our Independent Software Vendors and much of our reseller customer base. Security is essential to this vision and the addition of SSH1 in CSWEB is a key milestone for the product. Clearview chose to use RSA BSAFE® security software because it is widely accepted in the corporate and developer communities as a premier cryptographic standard."

"RSA Security is striving to provide leading technology markets such as ASPs with the security requirements their customers demand to keep their data safe and secure," said Scott Schnell, senior vice president of marketing and corporate development at RSA Security. "We are pleased to be working with Clearview and are confident that we will support its security needs in this expanding and developing market."

The RSA BSAFE® line of security software is embedded in today's most successful Internet applications, including Web browsers, wireless devices, commerce servers, e-mail systems and virtual private network products. Built to provide implementations of standards such as SSL, SMIME, WTLS, IPSec and PKCS, RSA BSAFE products can save developers time and risk in their development schedules.

#### ***About Clearview Software International, Inc.***

Clearview Software, founded in 1980, is a leading software development company dedicated to providing tools and services that bridge existing host-based (legacy) applications with emerging technologies. Clearview's Co\*STAR family of products helps application developers worldwide to easily provide full Windows functionality without altering their core application code. Co\*STAR, Co\*STAR for DOS, CSWEB and Co\*STAR For The Web (CSFTW) are all part of Clearview's software offerings.

Clearview is a privately held company, located in Amherst, NH. Telephone: 603-42-7115, Fax: 603-472-8421. Additional information is available at <http://www.clearview-software.com/>
