## Mobileclip™

**Mobileclip™ is a new information-processing device that will replace traditional slate and paper-based clipboards.**

With wireless portability, this rugged, lightweight “electronic clipboard” is ideally suited for data intensive operations that include data entry and gathering, forms processing, information sharing and archiving. Mobileclip’s advanced design – which includes no moving parts and “hot-swappable” power technology -- overcomes many of the limitations imposed by traditional laptop, tablet PC and PDA-centric solutions. Mobileclip enables them to collect, transfer and share data from remote locations (i.e. away from a stand-alone/networked workstation or database server).

**Mobileclip allows the user to monitor multiple events and to transmit data to/from multiple stations from this one, comprehensive communications device.** This is a unique advantage because it enables the user to share incident-specific data and information with other operators, agencies, departments, command posts and field-based personnel who are involved with assessing, mobilizing and deploying the appropriate equipment, supplies and rescue and/or assistance. With Mobileclip’s wireless delivery technology we are able to put “full screen” information in the hands of the decision makers that are out doing their job.

**Mobileclip frees the user from the constraints of traditional data access tools.** For example, in Healthcare environments Mobileclip’s wireless advantage enables the immediate, authorized sharing of patient-specific data and information with other physicians, nurses, pharmacists and specialists who are involved with assessing, prescribing and monitoring a patient’s course of therapy. Additions and changes to patient-specific data are immediately accessible to any Mobileclip.

### Key system characteristics include:

- **True Thin Client architecture** frees the user from restrictions imposed by conventional PC devices.
- Interface server provides **highly integrated views of critical data fields** and graphical representations. Diverse applications (including Legacy apps) can be accessed using mouse, stylus, speech or touch screen techniques
- Forms oriented applications benefit from **onboard forms templates** and speech recognition modules.
- **Highly secure** encrypted communications protect sensitive data streams
- **No live data storage** means “read only “ security, tied to individual login accounts on application servers.
- **Very long remote life.** No moving parts to power or cool results in long use cycle between battery charges or changes. Battery life exceeds 12 hours in normal use.
- **Hot swappable power** design means that the unit stays connected with active sessions even during power supply changes.
- Mobileclip also contains the embedded circuitry and hardware necessary to provide Geographic Information Systems (GIS) mapping and/or GPS capabilities (user options).

For more information about the Mobileclip™ system, please contact us at (603) 472-7115, or check out web site at <http://www.clearview-software.com>.

Clearview Software International is a leading provider of software tools and services that create effective user interfaces to diverse, commercial applications. With Co\*Star as its core technology, Clearview Software has effectively integrated host based, Windows and legacy applications on over 150,000 systems in local, LAN, WAN and Internet architectures. Co\*Star helps application developers, worldwide, to easily provide full Windows functionality and repurpose existing applications without altering their core application code. The Company, founded in 1992, is headquartered at 326 Chestnut Hill Road, P.O. Box 1370, Amherst, N.H. 03031, with sales offices in Chicago, Canada, England, and New Zealand. For more information contact us at (603) 472-7115, [info@clearview.mv.com](mailto:info@clearview.mv.com) or see our website at <http://www.clearview-software.com>
